MAIL DATE		DELIVERY MODE		
06/08/2007		PAPER		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)
	10/698,134	GENICK, RAYMOND M.
	Examiner	Art Unit
	Leonard J. McCreary, Jr.	3616

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 16 April 2007.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-21 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 1-21 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on 28 April 2006 is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1.) Certified copies of the priority documents have been received.
 2.) Certified copies of the priority documents have been received in Application No. _____.
 3.) Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-21 stand rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Re claims 1 and 15, the specification does not disclose "planar channel" bearing surfaces.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. 6,669,421 to Hofsneider in view of U.S. 4,650,208 to Mason, and further in view of US 5,580,201 to Brilmyer. Hofsneider discloses a Connecting Element with Eccentric Disks comprising:

- a threaded fastener 1 defining a pair of longitudinal channels 18, 20, each channel defining a generally flat bearing surface and a concave curved portion, said generally flat bearing surfaces being generally parallel. (Figures 1-3, 6) (Figure A below) (col 4, lin 3-5)
- a non-threaded portion 10, 12 of the fastener 1
- a first cam plate 8 non-rotatably coupled to the non-threaded portion 10 of the threaded fastener 1
- a second cam plate 22 Figure 3 defining an aperture having a pair of generally flat aperture bearing surfaces, at least one generally flat bearing surface being in contact with at least one generally flat bearing surface, said aperture being non-rotatably mated to the pair of longitudinal channels 18, 20
- the rotational position of the first and second cam plates with respect to each other is fixed (col 1, lin 36-40) (col 2, lin 5-7)

Hofsneider does not teach that either of the cam plates includes an arcuate slot.

Mason teaches the use of

Art Unit: 3616

- a cam plate with an arcuate slot in conjunction with an automobile suspension, the slot facilitating alignment adjustment (col 2, line 65 – col 3, line 2.)

It would have been obvious at the time of the invention to one of ordinary skill in the art to modify Hofsneider in view of the teachings of Mason to incorporate one or more slotted cams, so as to facilitate alignment (claims 1, 2, 15, 16.)

Hofsneider does not teach the first cam plate 8 is mated to the threaded fastener 10 using a knurled portion. Brilmyer teaches:

- a threaded faster with a knurl portion 48 configured to mate with the first cam plate (claims 1, 4, 15, 18.)

It would have been obvious to one of ordinary skill in the art to modify the cam bolt assembly of Hofsneider in view of the teachings of Brilmyer to accept and retain a cam using an interference fit of a knurled portion of the fastener since this was well-known manufacturing process at the time of invention, and so as to provide a secure connection.

Hofsneider teaches a cam bolt assembly with a T-shaped cross section 1

Figure 2 (claims 3, 17.)

Hofsneider teaches a longitudinal channel defining a pair of bearing surfaces

Figure 2 (claims 5, 19.)

Hofscheider teaches longitudinal channels 16, 18 are defined through fastener 1 threads 14 into the fastener core Figure 2 (claim 12.)

Hofscheider teaches a fastener comprising a shoulder portion 10 (claim 13.)

It would have been an obvious design choice to one skilled in the art at the time of invention that a cam bolt assembly used in such a suspension application should be configured to withstand a torque of 150N·m in order to avoid undue component deflection or failure (claim 6.)

It would have been an obvious design choice to one skilled in the art at the time of invention to manufacture a cam bolt assembly to the dimensions set forth in claims 7-11 in order to accommodate specific suspension structure and as utilizing such dimensions is within the level of skill of one in the art.

It would have been an obvious design choice to one skilled in the art at the time of invention to use a threaded fastener within the strength class of 10.9 or better in order to increase the strength of the assembly without increasing the physical size or weight of the assembly (claims 14, 20.)

Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hofsneider in view of U.S. 4,650,208 to Mason, and further in view of US 5,580,201 to Brilmyer as applied to claim 15 above, and further in view of U.S. 6,113,299 to Reichelt. Hofsneider does not teach the longitudinal channels may be partially defined by the non-threaded portion 12, 10 of the fastener 1. Reichelt teaches a threaded fastener with longitudinal channels that are

- partially defined by the non-threaded portion of the fastener.

It would have been obvious to one of ordinary skill in the art at the time of invention to extend the longitudinal channels of Hofsneider into the non-threaded portion of the

fastener in view of the teachings of Reichelt in order to maintain a greater cross sectional area in the region of the cam and thus increase the strength of the fastener (claim 21.)

Response to Arguments

1. Applicant's arguments filed 16 April 2007 have been fully considered, but they are not persuasive.
2. Applicant argues that the references do not teach the geometries claimed. Examiner maintains that the rejection is proper, because it would have been obvious to one of ordinary skill and creativity in the art to construct the cam assembly taught in Fig 3 of Hofsneider similarly to that which is claimed in the present application, so as to improve manufacturability by machining the channels with a ball end mill on a standard 3-axis mill with the bolt fixed in a single horizontal position and wherein angular orientation of the channels about the longitudinal axis of the bolt becomes irrelevant. See Fig. A below.
3. It has been held that a person of ordinary skill is also a person of ordinary creativity, not an automaton, and further that when there is a design need or market pressure to solve a problem and there are a finite number of identified, predictable solutions, a person of ordinary skill has good reason to pursue the known options within his or her technical grasp. If this leads to the anticipated success, it is likely the product not of innovation but of ordinary skill and common sense, and therefor obvious under §103. *KSR v. Teleflex et al., 30 April 2007.*

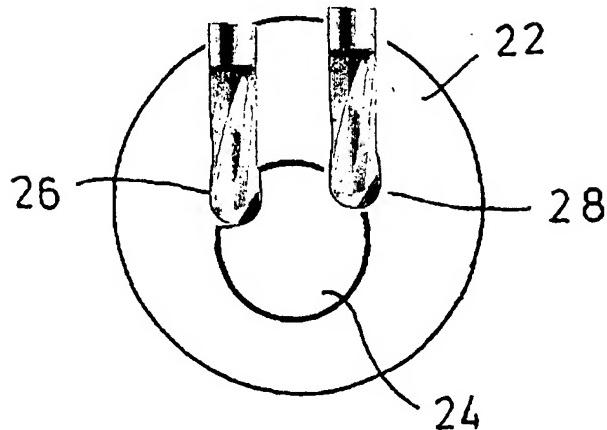

Figure A. Bolt is fixed in angularly arbitrary horizontal position; 3-axis vertical mill with ball end mill used to machine channels having parallel faces.

Conclusion

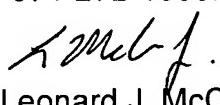

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leonard J. McCreary, Jr. whose telephone number is 571-272-8766. The examiner can normally be reached on 0700-1700 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Dickson can be reached on 571-272-6669. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system; see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
